

Maths Mastery - A Brief Overview

2014 Mathematics Curriculum

In 2014, significant changes were made to the maths curriculum. It was made more challenging and levels were abolished. At Malvern Parish, in KS2, we moved away from flexible groups to whole class teaching. We asked ourselves, were we meeting the curriculum's aims and purpose?

The 2014 national curriculum for mathematics was designed to raise standards in maths, with the aim that the **large majority** of pupils will achieve **mastery** of the subject.

Mathematics programmes of study state that:

- All pupils should become fluent in the fundamentals of mathematics;
- The expectation is that the **majority** of pupils will move through the programmes of study at **broadly the same pace**.
- Pupils who grasp concepts rapidly should be **challenged through rich and sophisticated problems before any acceleration through new content**.

Teaching Primary Mathematics for Mastery

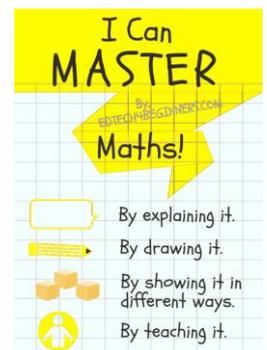

Mastering maths means acquiring a deep, long-term, secure and adaptable understanding of the subject. At any one point in a pupil's journey through school, achieving mastery is taken to mean acquiring a solid enough understanding of the maths that's been taught to enable him/her move on to more advanced material.

What does it mean to master something?

- I know how to do it;
- It becomes automatic and I don't need to think about it - for example, driving a car;
- I'm really good at doing it – painting a room, or a picture;
- I can show someone else how to do it.

Mastery of Mathematics is more...

- Achievable for **all**;
- **Deep** and sustainable learning;
- The ability to build on something that has already been sufficiently mastered;
- The ability to reason about a concept and make connections;
- Conceptual and procedural fluency.

Teaching for Mastery - Our Mindset

- We believe that **all** pupils can achieve;
- The children believe that they can achieve.
- Keeping the class working together so that **all** can access and master mathematics;
- Development of **deep** mathematical understanding;
- Longer time on **key topics**, providing time to go deeper and embed learning.

Mastery Specialist

Teaching for Mastery

1. We ALL start the journey TOGETHER.

2. Some children will need a little additional support along the way.

3. Some children, who feel confident, will be let loose. They'll be able to explore deeper into the woods, before returning to the group to continue on with the journey.

4. Children will not be racing off ahead on a different journey.

5. Children will not be left behind alone and isolated.

We're Going on a Maths Hunt

What's different now when teaching for maths mastery?

1. Seating - children sit in mixed-ability groups with a wide range of attainment on each table.
2. Planning - rather than planning for different attaining groups and their next steps in learning, we plan to take the whole class on a journey.
3. Time and steps - we spend longer on key units (number-based) and explore these in much greater depth.
4. Lesson structure - all lessons have just one learning objective/step are now structured in micro-steps to achieve that goal.
5. Differentiation of work - we now all do the same work. Compared to previous teaching, this can be summarised as 'Doing something different (*beforehand*) Vs Doing the same thing differently (*now*)'.
6. Depth - we provide opportunities for children to explore depth. Children are encouraged to think deeply and to make connections to different areas of mathematics, using conceptual and procedural fluency to apply knowledge to new situations and new contexts.
7. Repetition - lessons encourage use of repetition using precise mathematical language to embed learning.

8. Chanting - at key learning points, chanting using key mathematical vocabulary allows children to successfully articulate and explain their understanding.
9. Questioning- the 'correct answer' is no longer the end-point. Children are asked to explain their answer: "How do you know?" or "Explain your understanding" or "Convince me".
10. Answering in full sentences - children must answer all questions in full sentences. This gets children to think and consolidates their understanding.
11. Conversations between children - children work closely with their partners and others on their tables, having the same sorts of conversations modelled during teaching.
12. Little teachers - children have multiple opportunities throughout the lesson to explain their thinking to the rest of the class, often using the interactive white board.
13. Work in books - this now looks very different to before. Children focus on depth of understanding - variation not variety.

Providing Opportunities to Explore Depth

- Empty Number boxes;
- Present the same thing differently;
- True or False statements;
- Show me another way, and another ...
- Word Problems – solve and write your own;
- Draw an image that represents the maths;
- Write a calculation that represents an image;
- Write an explanation;
- Teach a friend;
- Design a Tarsia puzzle.

Solve 27×5 in different ways

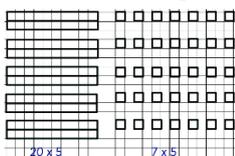

(a) Draw it

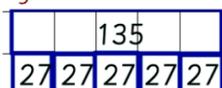

(b) Write a number sentence

$$27 \times 5 = 135$$

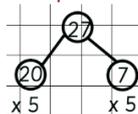

(c) Illustrate using Dienes

(g) Bar Model

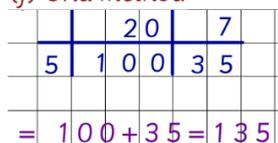

(d) Part-part whole

(e) Partitioning

$$\begin{aligned}
 27 \times 5 &= 20 \times 5 + 7 \times 5 \\
 &= 100 + 35 \\
 &= 135
 \end{aligned}$$

(f) Grid method

Ext: Write a word problem
