

Learning and Practising Times Tables

Try to practise for 5-10 mins every day - you'll be astonished at the improvements you'll make!

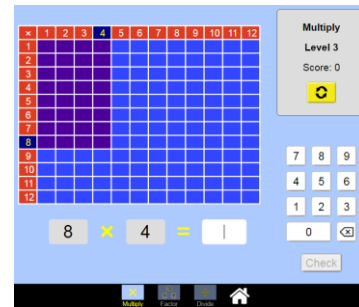

A fantastic one for your computer or tablet:

A simple virtual 12-side dice roller works well. See how many you can get in a minute. Try several times to beat your score!

Use a pack of playing cards. Just remove the Kings and use Jacks as the 11 and Queens as the 12. Practise a single times table (like 8) and time how long it takes you to get through the pack. Turn two over and multiply them together. Challenge your friend (or parents!) – turn over one each simultaneously and multiply them together. See who wins by collecting the most cards.
